MR Report

Procedure Description:

Contrast MRI [illegible] pelvis performed with T1W [illegible] axial & [illegible] body array coil.

[illegible] of Carcinoma cervix post radiotherapy status.

Finding:

Uterus is anteverted and shows normal [illegible] anatomy. [illegible]metrium sho normal thickness.

Post RT changes are seen in the cervix with streaky changes in parametrium appearing predominantly hypointense in T1W & T2W images

Urinary bladder shows normal morphology & normal hyperintense signal of bladder wall in T2W images. Perivesical & perirectal fat planes are maintained.

Pelvic floor & presacral space are unremarkable.

Regional lymphnodes: No enlarged lymphnodes are seen.

No fluid is seen in the POD.

Major pelvic vessels show normal flow void.

Mild circumferential thickening of rectal wall is noted : post RT.

Impression:

Post RT changes with no apparent local residual disease.
